

**OutBack
Power**

Are you frustrated with grid outages?

OutBack's SkyBox true hybrid energy system and Radian Series inverter/charger let you easily add battery backup to an existing grid-tied system.

Why add battery backup?

- Give yourself the peace of mind that comes with having backup power in the event of a utility outage, whether planned or unplanned
- A battery-based system lets you address Time of Use rate structures in a way that makes sense for you, not the utility
- You'll enjoy energy flexibility in the face of an evolving net metering landscape and other unforeseen utility policy changes

Why choose OutBack Power?

- Because we monitor and adjust charging current, our solutions are easier on batteries than other retro-fit options
- We use frequency shifting instead of an electromechanical breaker, meaning no additional hardware is required
- We have a plug and play solution for legacy residential string inverter or micro inverter systems with full generator support

Ask your OutBack representative for more information, or email sales@outbackpower.com and inquire about our battery retrofit solutions.
