

**OutBack
Power**

Are your customers frustrated with grid outages?

OutBack's SkyBox true hybrid energy system and Radian Series inverter/charger let you easily add battery backup to an existing grid-tied system.

Why add battery backup?

- Give your customers the peace of mind that comes with having backup power in the event of a utility outage, whether planned or unplanned
- A battery-based system lets your customers address Time of Use rate structures in a way that makes sense for them, not the utility
- Your customers can enjoy energy flexibility in the face of an evolving net metering landscape and other unforeseen utility policy changes

Why choose OutBack Power?

- Because we carefully monitor and adjust charging current, our solutions are easier on batteries than other retro-fit options
- We use frequency shifting instead of an electromechanical breaker, reducing possible failure points and requiring no additional hardware
- Plug and play solutions for residential string inverter or micro inverter systems offer full generator support and the ability to scale both storage and inverter

Ask your OutBack representative for more information, or email sales@outbackpower.com and inquire about our battery retrofit solutions.
